product description:

The internal suspension is used to suspend the cable tray or cable ladder from the threaded rod.

The threaded rod is anchored to the hanger using an MN nut, which must be ordered separately. The dimension of the nut is chosen by the diameter of the threaded rod.

Fixing the outer hanger to the route is done with bent edges of the sidewalls of each other.

The hanger allows the installation of partition in the cable route.

Maximum load is 90 kg.

surface finish:

S - Pre-Galvanized according to EN 10346, EN 10143, zinc-layer 15-27 μm

F - Hot Dip Galvanized according to ČSN EN ISO 1461, zinc-layer 45 μm (min. 35 $\mu m)$

ZM - galvanized steel with admixture of magnesium and aluminum according to EN 10346, EN 10143, protective layer

18-31 µm

sales amount:

1 pc

meets the requirements: ČSN EN 61537:02

storage:

MARNING

Risk of injury from cutting

Although the cable trays are produced with maximum effort to minimize sharper edges, it is necessary to wear protective gloves to carry, grip and work with cable elements.

Risk of system collapse

It is essential to strictly adhere to the maximum load limits for individual cable support systems and ensure proper installation according to the installation manual. The load capacity charts for each system are provided in the manufacturer's catalog, available in printed form or on the manufacturer's website. The specified load limits do not account for any additional loads, such as snow, wind, or seismic

Electricity injury

As individual components of cable management systems are made of electrical conductive material, it is essential not to work with a system near live electrical parts. Infringement of the safety regulations may cause serious injury of health or death.

Safe Use

Under normal and foreseeable conditions of use, there are no risks to consumers, provided that proper installation and usage are carried out in accordance with the installation manual.
